

In researching today's nurse's stations and the relationships among people, processes, objects, and space, we found that providing the correct product solutions can encourage less stressful environments. This will allow for caregivers to stay focused on their daily healing tasks.

The ever-changing nature of laboratory environments demands an adaptable approach. We suggest modular parts that can easily be reconfigured to evolve with potential changes and can create an environment to encourage discovery.

healing
environments

Healing Environments has evolved organically through OFDC's partnerships with hospitals, medical centers, and private practices. Our HE team formulates a conclusion through observation, research, analysis, and communication. We will work to find the best solution for all areas of your healthcare facility.

Waiting spaces should support a variety of users both for today and tomorrow. The furniture within this space should be as flexible and accommodating as possible.

Throughout our experiences, radiology is a specific department where ergonomic solutions are a must. It is a special atmosphere that we aim to provide optimum comfort, reduced fatigue, and efficient workflow to ease the stress of long hours for your doctors.

We have found that today's exam rooms need to be versatile enough to accommodate exams, consultations, and education. Ample storage and display space are key ingredients to a hard-working exam environment.
